

their families and self on so many levels which included Academics, Technology, Personal and just as importantly their environment (home and community, as well as online approach to living)

The Medical field had its challenges in supporting their SUNY environment while providing care and support to patients, student, systems, etc. There has been an exodus of retirees, resignations, etc. of staff leaving SUNY for other opportunities i.e. telecommuting. As a committee, we also recognize the efforts all medical centers from the beginning of pandemic to present in assisting our students, families and communities during this time.

We noted that EOC was not present, we know that they have been challenged prior to pandemic and we are wondering on their issues before, during and currently what they are dealing with and how we can advocate for such an invaluable program and students.

We also discussed the importance of Political Literacy and our continued advocacy efforts for EOP. Though financially it will be a better year, we also discussed the importance of continued academic support, and hopes that we can continue to address Student Loan Debt crisis, as a few students did take out loans during the Pandemic, though they were home and received CARES act funding but yet needed more funds to help with insecurities in housing, food, etc. We had a few students intern with NYS Assemblymembers (locally and virtually). They learned a great deal. My hope is that we can continue to encourage this.

We look forward to meeting in the Fall.

Meeting Adjourned: 10:15am
